

Frame It as Cases: Work That Speaks for Itself

Divine Gabriel : Backend AI Engineering, FlyRank AI Internship

VOICE CARD : Direct, Dry humor, No beating around the bush, honest.

Case Study: Learning Backend AI Engineering at FlyRank

The Problem

I came into FlyRank's Backend AI Engineering track knowing the basics — Postman, the core REST verbs, a bit of PHP, and just enough JavaScript from my Uni (not exactly my favorite subject -_-). I picked this track for a reason outside the track itself: I'm a cybersecurity student, and I wanted to actually understand what I'd be defending — you can't secure what you don't understand how to build.

What I Did

I started with Claude 101 and the backend courses on the portal. My first real assignment: build two CRUD API endpoints in Express. It wasn't a big dramatic project — a couple of GET routes — but I still hit syntax errors along the way and had to actually debug through them instead of guessing. No shortcuts, just fixing it until it ran clean.

What Came Of It

The endpoints run. More than that, the fundamentals actually stuck — what Express is doing, what CRUD really stands for, how requests and responses move between client and server. APIs stopped being "the thing I test in Postman" and became something I understand from the inside. That's exactly the kind of understanding I want going into cybersecurity — knowing how the systems are built before I try to break or defend them.

Before / After

Generic AI line:

"Leveraging cutting-edge AI tools, I developed robust API endpoints, showcasing strong technical acumen and driving impactful results within a dynamic backend environment."

My edited version:

"Built two CRUD endpoints in Express. Hit a few syntax errors, fixed them, and actually learned how requests work under the hood instead of just copying a tutorial."

Bio

Name: Divine Gabriel — Cybersecurity student, currently a Backend AI Engineering intern at FlyRank AI. Learning how APIs and backend systems are actually built, so I know exactly how they break.
